

Amendment to the Claims:

This listing of claims will replace all versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A method for distributing a document to at least one destination, the method comprising:

receiving document data representative of an electronic document to be distributed into a document processing device including a processor and memory;

associating each of a plurality of device queues with a unique document processing functionality;

creating a job by appending to the document data at least one printer job language command, wherein the at least one printer job language command includes instructions for the distribution of the job via at least one of facsimile and e-mail by a document distribution queue and device data specifically identifying at least one device queue for distribution of the electronic document wherein the document distribution queue is not pre-associated with the document output destination;

associating each device queue with ~~[[a]]~~ the document output destination;

communicating the document data and ~~appended~~ at least one appended printer job language command to the document distribution queue via a data network;

receiving, into the document distribution queue, the document data and at least one appended printer job language command;

parsing, via the document distribution queue, the appended printer job language command from the document data;

distributing the job, on the basis of parsed printer job language command, inclusive of the at least one printer job language command, to a facsimile destination or an e-mail destination corresponding to at least one device queue specified within the ~~at least one~~ parsed printer job language command; and

processing each job received into each device queue in accordance with the document processing functionality associated therewith.

2. (Canceled)

3. (Cancelled)

4. (Canceled)

5. (Previously Presented) The method of claim 3 further comprising, after parsing the print job language command, distributing the job to a device queue by the document distribution queue, wherein the device queue points to the document output destination.

6. (Previously Presented) The method of claim 1, further comprising selecting the document output destination from the group consisting of an image forming device, an email system, a web publication system, and a document management system.

7. (Previously Presented) The method of claim 1, wherein the document is distributed to a plurality of document output destinations.

8. (Previously Presented) The method of claim 5, wherein the document is distributed to a plurality of document output destinations.

9. (Currently amended) A system for distributing a document to at least one destination, wherein the system comprises:

means ~~adapted~~ for receiving data representative of an electronic document to be distributed into a document processing device including a processor and memory;

a plurality of device queues, each device queue having associated therewith a document processing functionality;

job creating means ~~adapted~~ for appending at least one printer job language command to the document data, wherein the at least one printer job language command includes instructions for the distribution of the job via at least one of facsimile and e-mail by a document distribution queue and device data specifically identifying at least one device queue for distribution of the

electronic document wherein the document distribution queue is not pre-associated with the document output destination;

means ~~adapted~~ for associating each device queue with a document output destination;

means ~~adapted~~ for communicating the electronic document data and ~~appended~~ at least one appended printer job language command to the document distribution queue via a data network;

means ~~adapted~~ for receiving, into the document distribution queue, the document data and at least one appended printer job language command;

means ~~adapted~~ for parsing, via the document distribution queue, the appended at least one printer job language command from the document data;

distributing means ~~adapted~~ for distributing the job, inclusive of the at least one printer job language command, to a facsimile destination or an e-mail destination corresponding to at least one device queue specified within the at least one printer job language command on the basis of parsed at least one printer job language command; and

means ~~adapted~~ for processing each job received into each device queue in accordance with the document processing functionality associated therewith.

10. (Canceled)

11. (Previously Presented) The system of claim 9, wherein the document distribution queue does not point to the document output destination.

12. (Canceled)

13. (Previously Presented) The system of claim 11, wherein the document distribution queue is further adapted to distribute the job, on the basis of the at least one printer job language command, to a device queue, wherein the device queue points to the document output destination.

14. (Previously Presented) The system of claim 9, wherein the document output destination is selected from the group consisting of an image forming device, an email system, a web publication system, and a document management system.

15. (Previously Presented) The system of claim 9, wherein the document is distributed to a plurality of document output destinations.

16. (Previously Presented) The system of claim 13, wherein the document is distributed to a plurality of document output destinations.

Claims 17-32 (Cancelled)
